

SilkNaturals Pigment Pots

after applying base coat
apply a coat of clear polish

let dry for 2-3 seconds
then dip into the Pigment Pot

When the color coat is dry
apply a top coat

1. Apply base coat, and let dry. You can use clear nail polish if you don't have a base coat.
2. Apply a thin, even coat of clear nail polish being sure to leave a gap between the polish, and the cuticle. Be sure to apply polish to the tip, and edge of your nails too. Blow on it gently for 2-3 seconds until it feels cold.
3. Immediately dip into the Pigment Pot, shake to remove excess, and let dry.
4. Repeat steps 2-3 if a second coat is desired. Most colors don't require it.
5. Apply 1-2 coats of top coat being sure to seal the tips for maximum durability.

To do French manicure tips put a little pigment into the lid, and tap to make it level. Then coat the tip of your nail in clear polish, allow to dry for 2-3 seconds, and dip into the pigment.

We recommend Poshe Fast Drying Top coat, and a non-quick drying clear polish for this process.
